

Minh-Nhat Nguyen

(+84) 898-203-321 | 2512021580@student.hcmus.edu.vn | github.com/xdnhatnguyen

EDUCATION

University of Science, VNUHCM

Bachelor of Information Technology

Ho Chi Minh City, Vietnam

Aug. 2025 – 2029 (expected)

Intended Major: Computer Science

Relevant Coursework: Calculus, Linear Algebra, Data Structures and Algorithms

Le Quy Don Gifted High School

High School Diploma – Mathematics Specialization

Da Nang, Vietnam

Aug. 2022 – May 2025

EXPERIENCE & RESEARCH

Undergraduate AI Researcher

University of Science, VNUHCM

March 2026 – Present

Ho Chi Minh City, Vietnam

- Developing a Training-Free method for Style Transfer using Diffusion Models and Flow Matching.
- Optimizing generative algorithms by manipulating the sampling process, guidance terms, and attention maps to control structural outputs.

PROJECTS

Handwritten Digits Classification | *PyTorch, CNN, MLP* | [GitHub](#)

Nov. 2025

- Led a research team to build and train Convolutional Neural Network (CNN) and Multilayer Perceptron (MLP) architectures from scratch for the MNIST dataset.
- Emphasized rigorous evaluation by benchmarking and comparing the efficiency, loss convergence, and accuracy between the two architectures.
- Co-authored an article detailing mathematical derivations and comparative analysis ([Article Link](#)).

Gomoku (Tic-Tac-Toe) AI Bot | *C++, Algorithms* | [GitHub](#)

Dec. 2025

- Developed a classical AI opponent for the game of Gomoku using procedural programming in C++.
- Implemented the Minimax algorithm combined with Alpha-Beta pruning to optimize decision-making processes and evaluate game states efficiently.

TECHNICAL SKILLS

Core Knowledge: Deep Learning, Computer Vision, Generative Models (Flow Matching, Diffusion Models)

Programming & Tools: Python, C/C++, PyTorch, Git, LaTeX

Mathematics: Linear Algebra, Multivariable Calculus
